

BREWERY FIT-OUT LONDON

A fast track fit-out for a leading UK brewery demanded a high level of co-ordination with the client's directly appointed brewing specialist. JCA designed and delivered all non-brewing installations, including internal structural steelwork, new plantrooms and laboratories and all mechanical and electrical services and safety systems.

"This complex project demanded significant technical expertise and a collaborative approach in partnership with the specialist brewing equipment team from Germany. JCA delivered on all counts and we were proud to work with such a friendly, professional and knowledgeable company. We would have no hesitation in recommending their services for further opportunities within the brewing industry."

Jasper Cuppidge, Founder, Camden Town Brewery
