

DATA CENTRE CONSTRUCTION WILTSHIRE

JCA has designed a highly secure and resilient MEP engineering infrastructure to support both site-wide and new data centre deployments at Ark Data Centres' Spring Park Campus in Wiltshire. This also included life-cycle replacement works in a critical environment. In collaboration with the client's multidisciplinary team, JCA's designs consider a scalable approach to support Ark in realising their current and future demand for highly secure and efficient data centres.

"JCA has provided a valuable service to our data centre projects. Through a strong collaborative relationship we deliver new, innovative data centre solutions."
