

# OFFICE SPACE FIT OUT LONDON

JCA was engaged to carry out a full redesign of an occupied office space consisting of trading rooms, meeting space and vending area. Changes to the mechanical and electrical layout of the office included installation of new fan coil units, fire suppression system and new wall partitioning. The project was completed in a live building.

*"The project was demanding as it involved working in a live and fully operational building. We were pleased to see how well JCA communicated with and managed all stakeholders and how transparent their approach was. We enjoyed working with such a professional and, most importantly, knowledgeable company."*
