

COMMERCIAL OFFICE FIT OUT LONDON

JCA was engaged to create a new executive management suite, including shared meeting areas and executive offices at our client's headquarters. The building is a flagship example of a 'green' building with strict carbon criteria throughout and a range of best practice sustainable features. The project was completed in a live occupied building.

We designed new offices and meeting rooms consisting of new glazed partitioning. In order to improve privacy, crosstalk attenuation and acoustic barriers were installed around the partitioning. We have carried out full decorating throughout the area, including finishes to floors and modifications to the ceilings. The lighting scheme was reconfigured and new passive infrared sensors installed. In line with the client's green policy, the office uses 100 percent daylight-responsive LED lighting which minimises energy usage.
