

GOVERNMENT BUILDING FIT OUT LONDON

Our client was looking for a high degree of workmanship as well as excellent contract and project management capabilities to ensure a seamless and collaborative environment to complete the project. The fit out and interior refurbishment works were carried out in live tenanted areas therefore limiting the disturbance to the building's occupiers was of the utmost importance.

JCA had to offer a high level of flexibility due to the site being a listed Grade II building and the architectural merit had to be taken into consideration when planning and carrying out any work. This imposed certain restrictions on the way some of the work could be completed. As with any classified environment, our main focus was to ensure that the high level of security was adhered to by JCA engineers and subcontractors.
